(54) AQUEOUS EYE DROP SOLUBILIZING VITAMIN AS**(57)Abstract:**

PURPOSE: To obtain the aqueous eye drop, filled in a container made of polyethylene terephthalate having high light shielding properties without causing the migration of vitamin As in the content liquid and practically stable even by use thereof for a long period.

CONSTITUTION: This aqueous eye drop is obtained by filling an aqueous solution containing 0.003-0.1wt.%, preferably 0.01-0.5wt.% vitamin As and 0.01-1.0wt.%, preferably 0.05-0.2wt.% nonionic surfactant (e.g. a higher fatty acid ester or a sucrose ester of a fatty acid) in a container, made of polyethylene terephthalate, containing a pigment or pigments and U-polymer (R) (an amorphous polyarylate composed of an aromatic dicarboxylic acid and a dihydric phenol) added thereto and capable of shielding light at $\leq 380\text{nm}$ wavelength. The ingredients can be blended in the following amounts based on the polyethylene terephthalate: 0.1-10wt.% pigment and 1-20wt.% U-polymer(R). Vitamins As in the content liquid are further stabilized by using both in combination.
